CONFERENCE DETAILS:

Again, we will meet in a small group of experienced homeopaths to see live- patients, in which we struggled in our own practice.

In this case conference we'll explore aspects of **polychrests** which we didn't recognize in our patients. We'll learn about remedies that are very similar to our polychrests, highlighting this time Lycopodium, Pulsatilla and Aurum. So, in the clinical setting, we have more remedies at our fingertips including wonderful effective medicines that are often overlooked.

As a highlight of the theoretical part Paul will discuss the DD of the main remedies for **acute urinary tract infections**, a frequent situation in our practices where we need homeopathy to avoid potentially harmful other treatment.

In analyzing the cases during the conference, we will furthermore explore specific and essential **rubrics** of the repertory, using **differential materia medica**, to describe how people who need remedies in these rubrics actually present in practice.

And for sure we will learn some **new "remedy cycles"** (If you have special needs here: please write us)

Paul Herscu with his sublime knowledge and very specific "cycles and segments" view of homeopathy again will let us look over his shoulder and thus widen our skills in case analysis to help us with patient care.

If you want to present a case at the conference - if chronic or acute- , please make sure that the patient speaks English well enough (or please translate consecutively for her/him yourself.

Probably again, we'll have the wonderful possibility to have Uta Schildwächter with us as a translator) and contact Andrea Weninger herscu-seminar@homoeopathie-in-freiburg.de.
